

supporting small and medium business

Claisse St Vincent are leading Independent Financial Advisers based in Southampton with fifteen on-site employees and several consultants based in remote offices. Stickman Technology provide them with a full range of IT and computer support services which include:

- supporting all staff on a day-to-day basis both on-site and over the telephone, keeping all computer systems running to a professional standard.
- managing the migration of the in-house database to an SQL platform. A web front-end is now being developed to be used by both internal staff and the public, giving the company a strong competitive advantage.
- managing the hardware, software, server and network infrastructure, including network security, anti-virus solutions and backup strategy. This has included migration to an ADSL connection with Virtual Private Networking capabilities.
- writing custom software offering staff an easy platform with which to work with clients, but always maintaining the tough auditing standards essential for an Independent Financial Adviser.

Stickman Technology supports many other local businesses in similar ways, including Basepoint plc, leading provider of purpose built business space for new and growing companies in the South East.

“ We are delighted with the service and support that Stickman Technology provide. They cannot be faulted for professionalism, commitment and speed of response. It is a credit to Adam and his team that we think of them as an in-house resource rather than a contract provider. ”

*Mark Vincent, Partner
Claisse St Vincent*

“ We are constantly impressed with the high level of competency and customer service that Stickman Technology provide. We regularly use Stickman for extra help with our day-to-day IT requirements and especially when we need technical advice and support on IT projects whilst expanding our business. ”
